

Over 50 middle school girls, who have an interest in and propensity for IT and other science, technology, engineering and mathematics (STEM)-related subjects, spent the day discovering how much fun IT is. They did a variety of interactive technology-related activities as they rotated through four programs at CVCC (Programming/Software Development, Computer Networking Academy, Computer-Aided Design, and Math). They also participated in a group activity researching IT careers and then enjoyed a lunch with IT professionals.

Several activities and software programs were used to encourage the girls to experiment with computers. Girls from each of CVCC's associate districts (Brecksville-Broadview Heights, Cuyahoga Heights, Garfield Heights, Independence, Nardon Hills, North Royalton, Revere, and Twinsburg) were selected to participate in the program.

FIT Technologies and SchoolOne are proud to be part of this program, which empowers young girls to pursue an interest in IT and equips them to continue learning more about IT careers and STEM-related subjects. One of our staff enjoyed lunch with the girls and discussed her career at SchoolOne and Fit giving the girls an insight into some of the real day-to-day work in an IT company.
