

SchoolOne V.P. Henry Patel presents mobile learning research at eTech Ohio

“Building Mobile Learning Environments” was the topic of a presentation given by Henry Patel, SchoolOne Vice President of Business Development, at this year’s eTech Ohio conference held in Columbus February 1-3.

Patel’s presentation focused on findings published in an action research report which showed that students who used interactive mobile learning devices like the iPod Touch were more motivated because the devices engaged their attention. Teachers benefitted as well, as the devices encouraged them to broaden their teaching pedagogy and allowed them to provide more personalized learning to their students.

“These devices are key to schools providing 21st Century learning environments. They are one of the best ways to put technology in the hands of students while lowering the total cost of ownership,” said Patel. “Paired with learning platforms like Studywiz, mobile devices can help provide teachers with real-time data necessary for formative assessments and individualized learning plans.”

The research Patel presented was sponsored by the Australia-based Etech group, makers of the award-winning Studywiz learning platform. SchoolOne is the official North American reseller of Studywiz products.
