

# SchoolOne releases update of its web-based Student Information System

On December 20<sup>th</sup>, Cleveland-based SchoolOne, LLC released version 10.3 of its web-based SchoolOne Student Information System software. The new release is part of a continuous improvement cycle and includes changes based on user feedback as well as upgrades that reflect recent technological advancements in software architecture and design.

The 10.3 release includes improvements to the Student Summary Page, adds fields to the Emergency Contacts page and adds notifications to the Volunteer Opportunity Module, a module that helps schools create, manage, and document family involvement in school activities.

Most significantly, the 10.3 release showcases **My Classroom**, a new feature devoted to improving the workflow of managing Gradebook and Attendance for Teachers on a single user interface. This release streamlines several important functions teachers use multiple times per day. My Classroom will gain even greater functionality in subsequent releases.

“We were eager to provide this new version to our schools. Our team of business analysts, software developers, and quality assurance specialists worked diligently to design, code, and test these upgrades to enable delivery of this release in time for the holidays,” said SchoolOne President Bob Longo. “This means that each of our client schools will start in January with the enhancements. We’re proud to offer new releases and enhancements as a standard in our software.”
